

ABSTRACT OF THE DISCLOSURE

An electro-hydraulic power steering apparatus in which a control device, a motor and a pump are integrated. The apparatus
5 includes a first housing, a second housing, a control device surrounded by the first and second housings, a motor disposed on a side of the first housing and a pump disposed on a side of the second housing. The motor includes a rotor, a stator and a frame. The rotor has a first bearing supported by the
10 first housing. The frame includes an inner circumferential face into which a stator core is press fitted and receives a second bearing of the rotor. The frame is secured to the first housing by a first clamp screw. The first housing and the second housing are secured by a second clamp screw. The first and second clamp
15 screws are tightened from the hand of the frame.
